

Plenhyage XL: The Evolution of Polynucleotides

Aesthetic Medicine made in Italy

Plenhyage XL from Bioformula is a polynucleotide-based skin injectable that improves skin elasticity and is effective against aging, photoaging and for treating fibrous tissues.
Its hydrating and anti-free radical activity help create the ideal environment for fibroblast growth, thereby restoring tissue elasticity and promoting cell turnover.

Plenhyage XL is the medical aesthetic treatment that naturally restores the optimal conditions of the skin for both face and body.

Origin of the Plenhyage XL Raw Material

Plenhyage XL is biocompatible and absorbable.

It features a premium, highly purified and safe raw material from Salmon gonad DNA that minimizes immunological side effects.

Plenhyage XL
Suggested Treatments

Anti-Aging

- Wrinkle Reduction
- Bright & Uniform Skin
- Improved Hydration Firmness & Elasticity

Scarring

- Decreased Depth of Scars
- Flattened Scar Tissue
- Reduced Scar Appearance

Hyperpigmentation

- Rebalanced Skin Complexion
- Decreased Appearance of Dark Spots
- Minimized Existing Pigmentation

Acne & Post-Acne

- Decreased Inflammatory Symptoms
- Minimized Scarring
- Reduced Skin Secretion

Alopecia

- Slowed Pathological Loss
- Stimulated Hair Growth
- Strengthened Hair Structure

Post-surgical Procedures

- Accelerated Tissue Regeneration
- Improved Dermis Structure
- Protection against Photo Damage
